MAGSTIM CONNECT.

Magstim Connect is designed to enable multiple compatible Transcranial Magnetic Stimulation therapy systems to be managed from one central system. This allows treatment templates, patient records, and treatment history to be securely shared between treaters and treatment sites. Magstim Connect will also send depression scoring questionnaires to patients, based on existing clinical rating scales, so the clinician is able to score and track the patient's progress.. The system is designed to accommodate multiple networked sites where patients may be treated at more than one clinical site.

- Patient data is synchronized across your Horizon 3.0 systems and web application
- Create treatment plan templates from your workstation
- Assign treatment plans
- Issue clinical self-assessment questionnaires
- Track treatment scores for patients post-treatment E.g., Y-BOCS, PHQ-9, GAD-7 etc
- Track and manage:

  o Clinics within the organization
  o Patient details
  o User/treaters
  o Management of referring physicians
  o Insurance providers
  o Clinical assessment history
  o Treatment history
  o Diagnosis notes
  o Medication notes
  o Download treatment progress report form in pdf format

Magstim Connect and Magstim Analytics are part of the Horizon 3.0 systems (this includes the Horizon Inspire).

MAGSTIM ANALYTICS.

Magstim Analytics collects metric data across patients, clinicians delivering therapy, specific clinics, and Transcranial Magnetic Stimulationdevices. The software is not intended for diagnosis of any conditions or to make clinical judgements, it is for organization of data.

Magstim Analytics is designed to streamline the management of multiple systems in an installation organization. With a web access portal, Magstim Analytics is accessible on multiple devices, including laptops, PC's, and mobile devices.

FEATURES INCLUDE:

PATIENT, TREATER, AND CLINIC ANALYTICS.

o Motor threshold (MT) levels
  - Configurable based averages including patients by demographic
  - Visualization of analytics
o Clinical assessment progress
  - Configurable averages
  - Visualization of progress
  - Improvement percentages over a treatment plan
  - Normalization of various scoring scale progression
  - Not intended for diagnosis of any condition
o Treatment accuracy
  - Configurable averages
  - Visualization of accuracy
  - Comparison of accuracy against averages
o Protocol history
  - See full parameter sets used for protocol delivery
  - See any notes made during treatment
  - See any changes made to power or positioning made during treatment

DEVICE ANALYTICS.

o MT Levels
o Treatment accuracy
o Protocol history
o Event log & audit trail
  - Highlights any events of changes made on the device, e.g., settings and network activity, etc.
  - Software versions and update history
o Device lifetime management
  - EPV levels
  - HCI levels
  - Service dates
  - Highlight devices that are close to or over limit
  - Sends automated e-mails to the device administrator to highlight service indicators
